

# Your gateway to convenient commuting

Integrated Services in Bus Station screens will provide customers with Live updates regarding the departure and arrival of buses from the stations, as well as the schedule of subsequent trips. This is done using a combination of Artificial Intelligence, Live GPS location of the bus, and Live traffic information.

In addition, there are Integrated Services in Bus Station screens installed in select stations to provide customers with additional smart services like the S'hail journey planning service as well as information related to the EXPO events, schedule and prices.
