

Driving you towards the future of managing parking fee payments

rta.ae

The initiative aims to develop a website platform to enable companies and corporations to create a main parking account, and add vehicle data, restrictions, and limitations for each vehicle and driver in terms of the following:

For days, times, specifying parking fees, specifying vehicle fees and specifying certain areas for completing payments, given that the parking account is the only means through which corporate accounts are charged and parking fees are paid.

Here are the main advantages that the system will provide:

- Managing (adding, modifying, and canceling) the vehicle fleet data of the Corporation.
- Defining restrictions and tying them to the vehicles identified in the system.
- Managing costs and billing parking usage for vehicles included in the account.
- Providing an interactive dashboard for the corporation's central parking account which includes reports and detailed invoices.
- Enabling the corporation's Admin to manage and place restrictions and limitations for every vehicle through the website.
- Enabling the corporation's drivers to pay exclusively through RTA Dubai app.
